Q1)

The steps to implement a servlet are as follows :-

i) Create a directory structure :-

The directory structure defines where to put different types of files so that the web-container may get the information and respond to requests.

ii) Create a Servlet :-

We can create by 3 methods :-

a) Servlet interface

b) GenericServlet class.

c) HttpServlet class.

iii) Compile the servlet using javac and put it inside classes folder of web-inf.

iv) Create a deployment descriptor
(web.xml) file with the servlet
name and its mapping.

v) Start the server and deploy
the Servlet.
